PART 1 - SELECTING ACTIVITIES WITH CLASS POINTS PROMPT

Selecting Activities with Class Points

Grade 3

Your elementary principal announced a school-wide classroom contest. Each student will receive daily points for completing their assigned math homework. Each teacher will then combine all the students' points for the week and submit their classroom totals to the principal. The principal will hold onto the collected weekly points for all the classrooms and share the results in five weeks.

Below are the weekly point totals for one third grade class:

200, 218, 202, 176 and 127 points.

1. Please find the total number of points the class earned. Show your work in the space below.

Handwritten work showing the calculation of the total points:

$$200 + 218 + 202 + 176 + 127$$

The student has crossed out the original numbers and written a simplified calculation: $800 + 200 + 23 = 923$ points. The final answer, 923 points, is circled. There are also handwritten numbers 800, 200, and 23 below the original numbers, with lines connecting them to the simplified equation.

The points a classroom earns may be used to participate in any of the following activities:

Activities	Points
Not enough Hat Day Points	1,000
Extra Recess	426 Only us no other
Flash Light Reading	389 cheapest
Pick a Classroom Seat	637 chaotic

2. Given the total class points over the five-week period and the listed activity points, how would you recommend that the class use their points? Make a recommendation to the class, persuading them to go with your idea. Include the following:
- The number of points they will use and the reward(s) they will get.
 - The number of points that will be left and how the class could use those points toward their next reward.
 - Why your recommendation is the best.

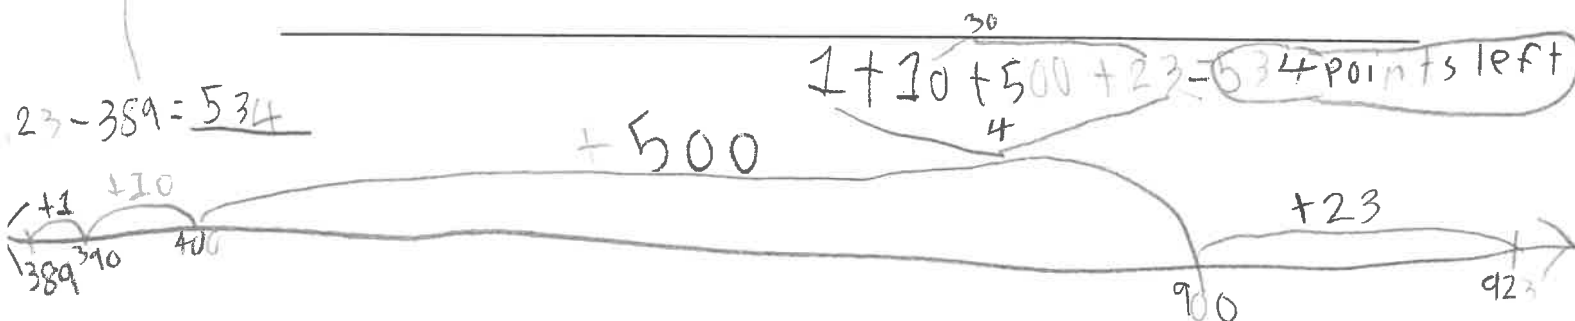

Please use the sentence stems and lines below to include the inclusion of your letter responses. Please remember to show your work.

- a. I would recommend selecting the following reward(s) Flashlight reading that will cost 389 points because it's the cheapest and we can group read and maybe bring a blanket to lay on, and it is a great opportunity to hang out with friends.

- b. After selecting the recommended reward(s), there will be 534 points remaining. Those remaining points could be used later to select extra recess ^{a little more points pick a seat} if we get because it would be fun if we got to play outside more.
Also we would be able to sit by our friends

- c. My recommendation is the best one for my classroom because...

it is fun to read

PART 2 – ASSESSMENT PROCESS QUESTION (5 MINUTES)

1. As you went about solving the two performance assessment problems, what were a few of the key pieces of information that you included in your response that helped you solve the problems? Please write your response on the lines below.

1. The number of points used

2. The number of points left

3. why that recommendation is best.

PART 3 – REFLECTION (5 MINUTES)

After you have responded to the first two parts of this assessment, please complete the reflection questions below.

1. If you were to decide on the activity choices for the classroom and you shared it with your classmates, how do you think they would respond to your recommendations and why?
